PROFESSIONAL SUMMARY

Computer Science student at RMIT University, minoring in Artificial Intelligence & Machine Learning, who ships production software end to end. Built and sold a medical practice management platform now in daily clinical use, plus four further full-stack products across web, mobile and Python — several with real users, all integrating live third-party and AI APIs. Seeking a software engineering internship or graduate role.

PROJECTS

Medical Practice Management Platform

June 2026 – Present

Built independently; now licensed to the practice on a paid monthly subscription

React · TypeScript · Supabase (PostgreSQL) · Deno · Capacitor · Tailwind CSS — private repository, walkthrough available on request

- Built and sold a full-stack platform now in daily clinical use at a Jakarta family practice, turning a self-initiated project into recurring monthly revenue; it automates the manual record-keeping I previously did by hand at that same practice.
- Architected a TypeScript monorepo (npm workspaces) spanning a React web dashboard, a shared domain library, and two Android apps packaged with Capacitor.
- Implemented around 40 serverless Deno edge functions on Supabase covering authenticated CRUD, atomic sequential document numbering and third-party integrations, backed by PostgreSQL.
- Integrated the WhatsApp Business API to deliver invoices, prescriptions and appointment reminders bilingually (English / Bahasa Indonesia), plus Google Calendar and Google Drive for scheduling and per-patient document storage.
- Integrated the Claude API to draft consultation reports and triage patient messages behind a propose-then-approve flow, so no clinical content is sent without the doctor's review; built throughout under healthcare privacy constraints.

Jarvis — Personal Life OS Dashboard

June 2026

Next.js 16 · React 19 · TypeScript · Supabase (PostgreSQL) · Claude API · Google APIs · Tailwind CSS

- Built a single-screen command centre unifying tasks, calendar, health and personal finance, backed by 38 REST endpoints and 10 PostgreSQL migrations.
- Implemented a Google OAuth flow with token refresh to sync Google Calendar, Tasks, Gmail and health data into one dashboard.
- Integrated the Claude API to extract structured transactions from uploaded bank statements and Gmail receipts, converting unstructured documents into queryable records.

Locked In — Social Fitness App

April – May 2026

React Native (Expo) · TypeScript · Supabase · Gemini API · EAS Build · Vercel — github.com/TusharLachman25/workout-tracker

- Designed and shipped a squad-based workout tracker in daily use by my friend group, distributed as an Android APK through EAS Build with a companion web build auto-deploying to Vercel.
- Built stories, leaderboards, a social feed, direct messaging and push notifications on Supabase using Auth, Storage, Realtime subscriptions and row-level security policies.
- Integrated Gemini vision to read workout screenshots from smartwatch apps and auto-fill activity, distance, duration, pace and calories, removing manual data entry.
- Documented environment setup, release builds and schema-migration practice so others could contribute.

AI Meal Suggestion — Pantry & Nutrition Assistant

February – March 2026

Python · Streamlit · Supabase (PostgreSQL) · Google Gemini · pandas · Altair — github.com/TusharLachman25/AI-Meal-Suggestion

- Built a pantry, recipe and macronutrient tracking app in ~3,500 lines of Python, on a relational schema designed from an entity-relationship diagram.
- Implemented automatic pantry deduction when a recipe is cooked, including unit normalisation and conversion between weight, volume and count.

- Integrated Gemini for a conversational recipe assistant with persistent multi-session chat history, and vision-based food-photo logging that estimates macros from an image.
- Calculated personalised calorie and macro targets from body metrics and activity level, with daily and weekly history.

Also built: Bets — a React Native (Expo) and Supabase app for logging and settling informal bets within a friend group.

EXPERIENCE

Information Systems Intern August 2023 – January 2024
Makmur Jaya Abadi | Jakarta, Indonesia

- Digitized and organized accounting records into Excel and Google Sheets, ensuring data accuracy and accessibility for analysis.
- Developed and implemented automated solutions using formulas and advanced spreadsheet features, resulting in a reduction in manual data entry time.
- Collaborated with accounting staff to identify areas for process improvement and implement automation strategies.

Part Time Medical Assistant June 2020 – April 2023
Dr Varkha's Teleconsultations | Jakarta, Indonesia

- Digitized patient medical records.
- Compiled laboratory and x-ray reports, patient notes and other pertinent data.
- Updated patient medical records in system, carefully protecting patient information and verifying data.
- Supported medical staff by answering phones and making appointments.

EDUCATION

Bachelor of Computer Science — Minor in Artificial Intelligence & Machine Learning Expected July 2027
RMIT University, Melbourne, Australia

Elementary School, Middle School and High School Completed April 2023
National High Jakarta School, Jakarta, Indonesia

- Completed Cambridge IGCSE, AS Level and A Level examinations.

Balvikas Student August 2011 – August 2023
Sathya Sai Education, Jakarta, Indonesia

- Attended weekly for 12 years, focusing on character development and values-based education.

SKILLS

- **Languages:** Python, TypeScript, JavaScript, Java, C, C++, SQL, HTML, CSS
- **Frameworks:** React, React Native (Expo), Next.js, Node.js, Streamlit, Tailwind CSS, Vite, Capacitor
- **Backend & Data:** PostgreSQL, Supabase, REST API design, serverless functions, OAuth 2.0, schema design and migrations, row-level security
- **AI Integration:** Claude API, Google Gemini (text and vision), prompt design, structured extraction from documents and images
- **Tools & Delivery:** Git/GitHub, EAS Build, Vercel, Vitest, Microsoft Excel/Word/PowerPoint

COMMUNITY SERVICE & INTERESTS

The Care Club — volunteer every 2-4 weeks with a charity group providing food, groceries, haircuts and medical services to families in need, alongside a general practitioner, optician and dentist.

Interests: Badminton · Padel · Swimming · Chess · Gaming
